

VUETIFY 3 FUNDAMENTALS

CHEAT SHEET

GET STARTED

Create a new Vuetify 3 application by running the following command:

```
yarn/npm/pnpm/bun create vuetify
```

BASIC APP MARKUP

Initialize Vuetify and Vue in the Default Application Markup.

```
<!-- src/App.vue -->

<template>
  <v-app>
    <v-app-bar title="App" />

    <v-main>
      <v-container> Hello World </v-container>
    </v-main>
  </v-app>
</template>
```

CSS UTILITIES

Vuetify offers a full suite of CSS helper utility classes. These range from setting text & background color, margin, padding, sizing, and more.

```
<template>
  <div>
    <!-- Text Color Utilities -->
    <p class="red-text">This text is red.</p>
    <p class="blue-text">This text is blue.</p>

    <!-- Background Color Utilities -->
    <div class="bg-green-darken-3">This has a green
background.</div>
    <div class="bg-purple-darken-2">This has a purple
background.</div>

    <!-- Spacing Utilities -->
    <div class="ma-2">Margin All 2</div>
    <div class="pa-3">Padding All 3</div>

    <!-- Typography Utilities -->
    <p class="text-h4">Headline Text</p>
    <p class="text-caption">Caption Text</p>

    <!-- Display Utilities -->
    <div class="d-flex">This is a flex container</div>
    <div class="d-inline">This is inline-block</div>

    <!-- Visibility Utilities -->
    <div class="hidden-sm-and-up">This is hidden on small
screens and up.</div>
    <div class="hidden-md-and-down">This is hidden on
medium screens and down.</div>
  </div>
</template>
```

COMPONENT INTERFACES

Maximize component customization in Vuetify with a three-tiered approach. Leverage props, slots, or components.

```
<template>
  <!-- Using Props -->
  <v-card
    title="Card title"
    subtitle="Card subtitle"
    text="Lorem ipsum dolor sit amet, consectetur adipiscing
elit, sed do eiusmod tempor incididunt ut labore et dolore
magna aliqua."
  />

  <!-- Using Slots -->
  <v-card>
    <template #title>
      Card title
    </template>

    <template #subtitle>
      Card subtitle
    </template>

    <template #text>
      Lorem ipsum dolor sit amet, consectetur adipiscing
elit, sed do eiusmod tempor incididunt ut labore et dolore
magna aliqua.
    </template>
  </v-card>

  <!-- Using Components -->
  <v-card>
    <v-card-title>Card title</v-card-title>

    <v-card-subtitle>Card subtitle</v-card-subtitle>

    <v-card-text>
      Lorem ipsum dolor sit amet, consectetur adipiscing
elit, sed do eiusmod tempor incididunt ut labore et dolore
magna aliqua.
    </v-card-text>
  </v-card>
</template>
```

BLUEPRINTS

Blueprints are pre-configured setups in Vuetify that act like templates for common UI patterns. Speed up dev time by using them as a starting point, and then customize to fit your specific needs.

```
// src/plugins/vuetify.js

import { createVuetify } from 'vuetify'
import { md1 } from 'vuetify/blueprints'

export default createVuetify({
  blueprint: md1,
})
```
