

VUETIFY 3 FUNDAMENTALS

CHEAT SHEET

GLOBAL CONFIGURATION

Global Configuration is where you define default props for Vuetify components. Set it up once, and the settings apply to all instances of the components.

```
// src/plugins/vuetify.js

import { createApp } from 'vue'
import { createVuetify } from 'vuetify'

export default createVuetify({
  defaults: {
    VAppBar: {
      flat: true,
    },
    VAutocomplete: {
      variant: 'filled',
    },
    VBtn: {
      color: 'primary',
      rounded: 'xl',
    },
    VCard: {
      rounded: 'lg',
    },
    VCheckbox: {
      color: 'secondary',
      inset: true,
    },
    VChip: {
      rounded: 'sm',
    },
  },
})
```

VIRTUAL COMPONENTS

Virtual Components let you create aliases for existing Vuetify components, like turning VBtn into VBtnAlt. Customize these aliases globally without extra files. It's component reuse, but smarter.

```
// src/plugins/vuetify.js

import { createVuetify } from 'vuetify'
import { VBtn } from 'vuetify/components/VBtn'

export default createVuetify({
  aliases: {
    MyButton: VBtn,
  },
  defaults: {
    VBtn: { variant: 'flat' },
    MyButton: { variant: 'tonal' },
  },
})
```

THEMING

Theming adjusts colors, fonts, and styles. Customize globally or per component for a unified look.

```
// src/plugins/vuetify.js

import { createApp } from 'vue'
import { createVuetify, ThemeDefinition } from 'vuetify'

export default createVuetify({
  theme: {
    defaultTheme: 'myCustomLightTheme',
    themes: {
      myCustomLightTheme: {
        dark: false,
        colors: {
          background: '#FFFFFF',
          surface: '#FFFFFF',
          primary: '#6200EE',
          secondary: '#03DAC6',
          error: '#B00020',
          info: '#2196F3',
          success: '#4CAF50',
          warning: '#FB8C00',
        },
      },
    },
  },
})
```

DATES

The new date composable offers a baseline for date manipulation but also supports all @date-io adapters.

```
// src/plugins/vuetify.js

import { createVuetify } from 'vuetify'
import LuxonAdapter from "@date-io/luxon"

const luxon = new LuxonAdapter({ locale: "sv" });

export default createVuetify({
  date: {
    adapter: luxon,
  },
})
```

ECOSYSTEM

Discover Vuetify's expansive ecosystem—documentation, community plugins, and source code—all at your fingertips.
